EDENT1FI**

**We aim to identify
early-stage T1D in children.**

*Join our local initiatives
to get your child screened for **Early Type1 Diabetes***

EDENT1FI 
European action for the Diagnosis of Early
Non-clinical Type 1 diabetes For disease Interception

Dear Parents,

At EDENT1FI we want to assess 200,000 children across Europe and find out whether they may develop type 1 diabetes. This involves screening children from the general population for biomarkers (auto-antibodies) associated with the condition. Our mission encompasses not only the early detection of type 1 diabetes in children but also the provision of continuous support and education to families navigating this challenge.

Diabetes can be fast, but you can be faster!

Today we invite you to participate in one of the local initiatives or studies aiming at detecting type 1 diabetes in children before the symptoms become apparent.

Early diagnosis allows for the correct and and timely treatment (although not a cure) and prevents serious complications.

With a **simple test** from a drop of blood we can detect type 1 diabetes in the early stages. If your child is affected, blood sugar can now be monitored well and serious health problems can be prevented.

Participation is **voluntary and for free.**

Please check with your health practitioner for more details about type 1 diabetes.
